

# Dynamic DNS Server Setup

This should only be done on one device on the network!

Need to use dnsmasq to act as dhcp/dns server:

<http://blogging.dragon.org.uk/howto-setup-dnsmasq-as-dns-dhcp/>

Right now the sub computer acts as the dns server, should make router do this.

current dnsmasq settings

Also important is to set a static IP in /etc/network/interfaces file:

```
auto lo eth0
iface lo inet loopback
iface eth0 inet static
    address 192.168.0.7
    netmask 255.255.255.0
    gateway 192.168.0.1
```
